

IDOM-USB User Manual

1 About IDOM-USB

IDOM-USB is a communications lead which converts USB signals to RS-485 signals. The IDOM-USB meets SELV.

2 Technical data

Electrical Characteristics	
USB communication speed	Full speed 12Mbps
Compatibility	USB1.1, 2.0
Power	≤400mW
Signal	Standard USB signal, standard RS-485 signal
Environment And Mechanical Characteristics	
Operating Environment	Indoor, no direct sunlight, no-flammable, corrosive gasses
Operating Temperature	5°C ~ 40°C
Operating Humidity	5% ~ 85%RH, no-condensing
Storage Temperature	-25°C ~ 70°C
Air Pressure	70kPa ~ 106kPa
Size (LWH)	88mm × 48mm × 20mm
Wire Length	USB segment length: 2000mm, RJ45 segment length: 300mm
Weight	130g
IP Code (converter)	IP54

3 Use

3.1. Connector diagram

Figure 3-1 Lead diagram

3.2 Connector

1) USB Connector (PC end)

Figure 3-2 USB connector

2) RJ45 Connector (drive end)

Figure 3-3 RJ45 connector

Pin number	Function
1	Not connected
2	A (RS485 +)
3	0V
4	+24V
5	Not connected
6	Enable
7	B (RS485 -)
8	B (RS485 -)

3.2 Operation steps

Please operate according to the following steps for the first time:

- 1) Download driver software "IDOM-USB drive" from the website: www.imoticon.com and install correctly. Please refer to the instructions of installation steps within installation package.
Once the drives have been installed correctly:
- 2) Remove the drives terminal cover

- 3) Connect one end of IDOM-USB to the computer USB port and the other to drive RS-485 port, as shown in figure 3-4;
- 4) Replace the drives terminal cover
- 5) Use IDSoft to perform communications test between PC and drive.

4 Troubleshooting

When IDOM-USB doesn't communicate between the computer and drive, please check the following:

- 1) Check whether the cable connected correctly.
- 2) Check the correct communication settings:
 - P10.02 – Drive address
 - P10.03 – Baud rate
 - P10.04 – Network data format
- 3) Check PC device manager for correct comm port and settings.
- 4) Check communication related function code settings.
